It would be some site-specific runs for Hunters Point. I would like to see that there is not much difference between BPRG with floor only and RESRAD BUILD with floor only. I think I have a planning meeting late morning next Thursday with Lyndsey and R9, I may loop you in to talk about some options for comparisons.

Other option, do you still have Lauren or someone else to do some MCNP runs (for BPRG, but just fixed contamination on floor, probably one type of building material (concrete) and a few isotopes (although one will probably be Ra-226 with daughters)).

Hi,

Anthony and I can't think of a RESRAD build person. I will schedule RVISL discussion when I get back next week. Leslie has been in server maintenance hell, but I will get her to give Bellamy a demo or a link.

Well first thing is a Michael/Rich discussion with ORIA. So we can then move the RVISL onto a broader EPA staff review.

Oh, reminder to find a RESRAD build person

Any word on Leslie progress on peak risk with produce/farm animals?

Stuart,

Text me when you land. We'll head to town together somehow. I have my computer and that's it. If the ORNL TM on RVISL is printed, I'll try and bring you a copy. Good news! Bellamy is Ex. 6 P. Privacy and his boss says he can work on some things for us. ORNL will coordinate. First task will be peak risk/prg stuff.
